EntelliGuard™G, the uncompromising Power Circuit Breaker

EntelliGuard™G is a new line of Air Circuit Breakers that offers a global product platform meeting IEC, ANSI and UL standards. The range consists of three and four pole devices ranging from 400 to 6400A in three basic frames with fault interruption ratings up to 150 kA. Its design offers a unique combination of high fault current withstand ratings, short fault interruption times and selectivity. The device includes the new state-of-the-art trip unit that enables the breaker with the latest technology for system safety, reliability, measurement, relaying, and communications using the Modbus or Profibus Protocol. EntelliGuard™G from GE Power Protection is easy to install, selective, fast and uncompromising in safety and reliability.
